

Roles and Responsibility:

In a nutrition assistant application, the customer refers to the end-users who utilize the application to manage their nutrition and diet. Here are some common roles and responsibilities of customers in such an application

Registration and Profile Management:

Customers are responsible for creating an account by providing accurate and relevant information during the registration process.

They need to manage their profile information, ensuring that their personal details, such as age, weight, height, and activity level, are up-to-date.

Inputting Food Consumption:

Customers are responsible for tracking and inputting the food items they consume into the application.

They need to search for the specific food items they consume and accurately record the quantity or serving size.

Managing Diet Plans:

Customers have the option to create personalized diet plans within the application based on their goals and preferences.

They are responsible for setting the start and end dates of the diet plans. · Customers need to monitor their adherence to the diet plans and make adjustments as necessary.

Reviewing Nutritional Information:

Customers should review the nutritional information provided by the application for food items, meals, and diet plans.

They need to understand the implications of the nutritional values and make informed decisions regarding their dietary choices.

Following Recommendations and Guidance:

Customers should consider and follow the personalized recommendations provided by the application.

They are responsible for incorporating the guidance and tips given by the application into their dietary practices.

Monitoring Progress and Reporting:

Customers should regularly monitor their progress towards their goals and track their nutritional intake.

They can generate reports and utilize visualizations within the application to gain insights into their dietary patterns.

Customers need to review the feedback and recommendations provided by the application and make necessary adjustments.

Overall, customers play an active role in utilizing the nutrition assistant application effectively. By accurately inputting their food consumption, creating and logging meals, managing diet plans, and following the guidance provided, they can make informed decisions about their nutrition and monitor their progress towards achieving their goals.
