

Technical Architecture

- ❖ The Nutrition Assistant system is divided into three main components:
User
- ❖ Interface, Backend Services, and External Services.
- ❖ The User Interface component represents the interface through which users interact with the system.

- ❖ The Backend Services component includes an API for handling user requests and responses, a Database for storing and retrieving data, and a Nutrition Functions module that provides nutrition-related functionalities.
- ❖ The External Services component represents any external APIs or services that the system interacts with, such as third-party nutrition databases or APIs.
- ❖ Please note that this is a simplified example, and you can customize and expand the diagram according to the specific architecture and components of your nutrition assistant system.
